CURRICULUM VITAE 2012 -2026

Objective:

"Experienced IT professional with over 14 years of expertise in optimizing infrastructure, enhancing security, and ensuring seamless operations. Proven record of accomplishment in network design, troubleshooting, disaster recovery planning, and IT team leadership. Dedicated to maintaining data integrity, minimizing downtime, and driving proactive IT solutions while staying at the forefront of technology trends to support organizational growth and success."

Summary:

I am a skilled IT professional with expertise in network infrastructure, server management, and cybersecurity across Windows and Linux environments. Proficient in DNS, DHCP, firewalls, VPNs, virtualization, and backup solutions like Veeam. Experienced in cPanel installation for web hosting management, domain handling, and server optimization. I deliver reliable IT solutions that enhance security, optimize performance, and support business success.

Career Aspirations:

My career aspiration is to continue advancing in the field of IT infrastructure and cybersecurity. I aim to leverage my extensive experience to take on more challenging projects and leadership roles, where I can drive innovation and implement cutting-edge solutions. I am particularly interested in opportunities that allow me to develop and implement comprehensive security strategies, optimize network performance, and contribute to the overall success of the organization.

Academic Records:

Year	Degree	Location
2013	Certified Project Management from USAID	Kabul
2009	Completed B.sc (IT) from Siliguri Institute of Technology (SIT)	India
2008	Attended MCSA and MCSE IIHT	India
2008	Attended CCNA and LINUX in Jetking	India
2007	Attended A+ and N+ from Netcom Institute	India
2006	Passed Class 12 from Himali Boarding School	India
2004	Passed Class 10 from S.T. Augustine's School	India

Bio Data:

Age	38
Date of Birth	18/06/1987
Marital Status	Married
Gender	Male
Address	Secunderabad, Hyderabad, Telangana, India

Work Experience:

Moraa Educational Complex

IT Manager

April 2, 2025 – Present

Job Purpose: Oversee the planning, implementation, and management of all IT infrastructure, support systems, and technology-driven initiatives to ensure secure, efficient, and innovative IT operations across the institution.

Key Responsibilities:

- Manage and maintain institutional IT infrastructure including networks, servers, virtualization platforms, and endpoint devices.
- Deploy and administer Proxmox for server virtualization and manage Windows Server 2016 environments with Active Directory (AD), DHCP, and DNS.
- Implement and manage pfSense Firewall with pfBlockerNG to enhance network security and block unwanted traffic and threats.
- Configure AdGuard Home for DNS-level content filtering to block ads, tracking, and malicious domains.
- Configured Synology NAS for secure file storage, backup, and collaboration.
- Configured and maintained Print Server for centralized printer management.
- Created and managed shared folders for scanning documents from network scanners, enabling automated document storage and collaboration.
- Monitor network performance and traffic using ntopng for real-time diagnostics.
- Utilize Zabbix OS and LibreNMS for comprehensive infrastructure monitoring and alerting.
- Implemented Snort as an Intrusion Detection System (IDS) for real-time network traffic analysis and threat detection.
- Deployed MeshCentral for remote system management and monitoring, enabling efficient administration of endpoints and servers.
- Create and manage shared folders on the network using Windows Server and Synology NAS for secure file access and staff collaboration.
- Configure Windows machines for QuickBooks to support accounting and finance operations.
- Implement Veeam Backup Solution to ensure comprehensive data protection and disaster recovery.
- Plan and enforce IT policies including user access, system security, and data protection.
- Provide technical support and training for faculty and administrative staff.
- Coordinate procurement, vendor relationships, and IT budgeting.
- Maintain data backup strategies and disaster recovery procedures to ensure business continuity.

Job Purpose: Oversee the planning, implementation, and management of all IT infrastructure, support systems, and technology-driven initiatives to ensure secure, efficient, and innovative IT operations across the institution.

Team Leadership & IT Operations:

- Manage and maintain the school's IT infrastructure, ensuring smooth operations across servers, networks, and workstations.
- Supervise IT operations and provide technical guidance to support staff and faculty.

Virtualization & Server Management:

- Deploy and administer Proxmox virtualization platform, managing multiple virtual machines and resources.
- Configure and maintain Windows Server environments including Active Directory (AD), DHCP, and DNS for centralized identity, network, and resource management.

Network Security & Monitoring:

- Implement and manage pfSense firewall with pfBlockerNG for advanced network filtering and threat prevention.
- Configure AdGuard Home for DNS-level ad-blocking, privacy enhancement, and content control.
- Use ntopng for network traffic analysis and visibility into bandwidth usage and potential issues.
- Utilize Zabbix OS for real-time monitoring and alerting on the status of critical IT systems.

Hardware Configuration & Maintenance:

- Configured and routinely maintain **Cisco SG350 28-port switches**, setting up VLANs, trunk ports, and access control lists to segment and secure the network.
- Performed firmware updates and system tuning to ensure optimal performance and stability.

Data Management & Application Support:

- Create and manage shared network folders with defined user permissions to facilitate collaboration and secure file access.
- Configure Windows machines to run QuickBooks, supporting accounting and finance operations.
- Implement and manage Veeam Backup Solution for secure data backups, recovery, and disaster preparedness.

Policy Development & Compliance:

- Develop and enforce IT policies including data protection, system usage, and acceptable use standards.
- Ensure compliance with educational data security standards and disaster recovery planning.

User Support & Training:

- Provide day-to-day technical support and issue resolution for staff and faculty.
- Deliver training sessions to improve staff IT proficiency and system usage awareness.

Procurement & Vendor Management:

- Manage IT assets and oversee procurement of equipment, licenses, and services.
- Coordinate with vendors and service providers to ensure reliable delivery and support.

Educational Technology & Digital Learning:

- Pioneered the selection, deployment, and administration of the institution's Learning Management System (LMS).
- Led the technical development of the online learning platform, integrating it with existing

systems and ensuring scalability for future growth.

- Trained and supported faculty in transitioning curriculum to the digital environment, fostering adoption of new teaching and learning methodologies.

Setaragan Mutahed

Technical Supervisor

November 2023- Present

Job Purpose: Oversee all technical aspects of the Electronic Money Institution project to ensure it is delivered on time, on budget and meets technical requirements.

Team Leadership & Project Management:

- Oversee the work of technical/IT staff and ensure projects and tasks are completed accurately and on schedule. Provide guidance, support, and feedback to the team.
- Manage technical projects from planning and budgeting to implementation. Coordinate with stakeholders and oversee project timelines and deliverables.
- Train and develop technical staff by identifying training needs, arranging courses, and conducting knowledge transfer sessions.
- Prepare technical documentation such as architecture diagrams, procedures, and knowledge bases for staff reference.

Network & System Management:

- Monitor performance of networks, servers, workstations, databases, and other systems to ensure smooth operations and optimal performance. Troubleshoot technical issues.
- Analyze technical needs and provide recommendations for infrastructure upgrades, new systems, or tools to management.
- Address user issues and requests, ensuring smooth delivery of IT services through helpdesk/support teams. Act as an escalation point for complex issues.

Policy Development & Compliance:

- Develop and implement policies and procedures for IT operations, security protocols, change management processes, and more.
- Ensure compliance with technical, security, and health and safety standards through audits and risk assessment.

Vendor & Stakeholder Management:

- Liaise with vendors, contractors, and 3rd party service providers for procurement, maintenance, and support needs. Manage vendor relationships.

Network Security & Infrastructure Management:

- Installed and configured pfSense firewall for enhanced network security, creating WAN and LAN configurations to establish secure network access.
- Implemented security measures by creating aliases and allowing specific ports, enhancing network security and reducing vulnerabilities.
- Installed and configured AdGuard Home for content filtering, blocking ads, malicious sites, tracking sites, and malware to ensure a safer browsing experience.
- Conducted regular monitoring and maintenance of the pfSense firewall, ensuring optimal performance and addressing security concerns promptly.
- Implemented logging and reporting mechanisms within pfSense firewall to track network activity and identify potential security threats.
- Provided training and support to staff on the use of pfSense firewall and AdGuard Home, ensuring effective utilization of security tools.
- Stayed updated with the latest developments in network security technologies and best practices, continuously improving the organization's security posture.

Application & System Deployment:

- Deployed QuickBooks for managing accounting processes.
- Implemented and managed TSPplus for remote desktop and application delivery services.
- Analyze technical needs and provide recommendations for infrastructure upgrades, new

ASAR KHAN

Email: asar23@gmail.com; asarkhan447@gmail.com

Phone Number: 0091 8509169630

systems, or tools to management.

Additional Tools & Technologies:

- Set up and maintained OpenVPN for secure remote access.
- Deployed and managed ntopng for network traffic analysis and monitoring.
- Implemented Snort for intrusion detection and prevention.
- Utilized CrowdSec for real-time security monitoring and threat intelligence.
- Employed Veeam application for comprehensive backup, recovery, and data protection.

E-Topup System Management:

- Administered and maintained the Setaragan E-Topup system, ensuring reliable service delivery and seamless integration with Mobile Network Operators (MNOs) for electronic recharge services.

Financial Transactions Management:

- Managed and reconciled the financial transactions generated by the E-Topup system, ensuring accuracy in customer billing and reporting.

Collaboration with MNOs:

- Liaised with Mobile Network Operators (MNOs) to facilitate technical integration, resolve issues, and ensure continuous service uptime for electronic recharge and mobile services.

System Monitoring and Troubleshooting:

- Monitored the E-Topup system for performance and resolved technical issues promptly to minimize downtime.

Reconciliation and Reporting:

- Conducted daily reconciliation of customer transactions, ensuring accuracy in financial records and coordinating with the finance team for timely reporting and auditing.

Brighthway Consultancy

IT Officer

Feb 2023 – October 2023

Job Purpose: Manage and oversee the company's network infrastructure, operations, and security and user support functions. Ensure smooth network performance, compliance with security standards, and around-the-clock technical support.

Network Management & Security:

- Managing LAN/WAN networks and network security systems.
- Establishing network specifications and configurations.
- Securing network access, monitoring, and evaluation.

User Support & Training:

- Conducting training programs and providing user support.
- Providing 24/7 critical support and technical assistance.

Infrastructure & Enhancements:

- Upgrading network infrastructure and implementing enhancements.
- Surveying and monitoring network operations.

Documentation & Compliance:

- Maintaining inventory and documentation of equipment.

ASAR KHAN

Phone Number: 0091 8509169630

DAWIOIL LTD

IT Consultant

Sept 2022 – Jan 2023

Job Purpose: Evaluate clients' existing IT infrastructure and provide expert guidance, solutions and support to optimize systems, enhance security, ensure compliance and empower users through strategic technology management, integration and training. Maintain expertise in current industry technologies, standards and best practices.

Infrastructure Optimization:

- Analyzed existing IT infrastructure for optimization opportunities.
- Evaluated and optimized Windows infrastructure, focusing on Windows Servers, Active Directory, DNS, and DHCP.

Security Enhancement:

- Developed and implemented IT policies to ensure data security and reliability.
- Configured firewalls and security tools to enhance system protection.

Training and Support:

- Provided training and support for new software and technology tools to empower staff in effectively managing Windows-based systems.
- Empowered staff to effectively manage Windows-based systems.

Industry Compliance:

- Ensured adherence to industry standards by monitoring and promptly resolving IT issues.
- Minimized system downtime through proactive management.

Cross-Functional Collaboration:

- Collaborated with department heads to define technical requirements.
- Aligned technology solutions with organizational objectives.

Industry Awareness:

- Kept up to date with emerging technologies and industry trends.
- Maintained a forward-thinking approach to Windows Infrastructure management.
- Advised on Veeam Backup implementation to strengthen data protection and disaster recovery processes.

Straun Pharma

IT Officer

March 2022–August 2022

Job Purpose: Develop and manage the company's IT training programs to assess skill gaps, design job-specific materials, implement assessments, and ensure employees' continuous development and compliance with IT training standards. Enhance program effectiveness through data analysis and relationship management.

- Developed and executed comprehensive IT training programs aligned with company goals.
- Conducted needs assessments to identify employees' IT skill gaps.
- Collaborated with department heads to design job-specific IT training materials.
- Managed the IT performance assessment system, including evaluations and feedback.
- Implemented strategies for IT staff engagement and career growth.
- Ensured compliance with legal and regulatory IT training requirements.
- Evaluated IT training data to enhance program effectiveness.
- Cultivated relationships with IT training providers and associations.
- Mentored IT personnel for their professional development.

ASAR KHAN

Email: asar23@gmail.com; asarkhan447@gmail.com

Phone Number: 0091 8509169630

CS Lecturer and Head of IT Department

Oct 2019 – Feb 2021

Job Purpose: Provide strategic leadership and management of the IT Department to deliver high-quality academic programs, uphold research excellence, enhance the student experience, and foster collaboration across the university in alignment with its goals.

- Set and executed departmental academic strategy in alignment with university goals.
- Managed cross-cutting faculty areas and functional responsibilities.
- Established effective structures for communication, management, and decision-making.
- Represented the university internally and externally, fostering its reputation.
- Enhanced student experience by overseeing admission, instruction, and examination.
- Provided pastoral support and ensured adherence to regulations.
- Developed new programs to attract students and markets.
- Upheld research integrity and fostered a progressive research environment.
- Implemented HR policies and managed staff performance.
- Supported staff development and promoted excellence and cooperation.
- Collaborated across departments and faculties.
- Included students in relevant decision-making processes.
- Ensured safety compliance and a healthy environment.
- Reported to senior management on IT training initiatives' outcomes Mashal University.
- Maintained high standards in teaching, research, and resource management.

Zippy Link ITManager

Aug 2019 – Sep 2019

Job Purpose: Oversee core systems operations, infrastructure management and technical support functions to ensure impeccable performance, security, availability and scalability of the organization's IT systems and services.

- Administered core operating systems, networking, security, and file systems.
- Delivered project milestones under pressure, meeting production deadlines.
- Proficient in load balancing, scaling, UNIX-related services, TCP/IP, DNS, and HTTP(s).
- Resolved problems and escalated issues while following development best practices.
- Ensured impeccable uptime through proactive monitoring and disaster recovery.
- Managed high-frequency monitoring and enhanced system performance.
- Deployed servers using scripts, managed instances, and troubleshooter.
- Monitored system integrity, reviewed logs, and conducted security checks.
- Implemented daily backups, archives, and user account management.
- Recovered from hardware/software failures, coordinated with stakeholders.
- Applied OS patches, upgraded tools, and added/configured services.
- Conducted performance reporting and tuning, hardware upgrades, and optimizations.
- Managed CPU, memory, disk partitions, and data center equipment.

Collaboration & Reporting:

- Reported to CEO and Head of Admins; collaborated with ICT staff.
- Coordinated with departments, vendors, ISPs, and IT Solution Center.
- Prepared IT reports and communicated with management.

Security & Compliance:

- Ensured security software updates and compliance.
- Supported computer hardware and software troubleshooting.

IT Manager
Muslim English Language Institute
April 2016 – August 2019

Job Purpose: Manage all aspects of IT operations, infrastructure, security and user support to ensure smooth running of systems and reliable delivery of IT services across the organization. Provide technical leadership and collaborate with stakeholders.

System & Network Management:

- Managed, configured, and ensured reliable computer system operations.
- Installed and maintained local and wide area networks (LANs/WANs).
- Monitored and maintained secure data communication networks.
- Oversaw installation, configuration, and troubleshooting of systems.
- Designed, expanded, and maintained the network infrastructure.
- Managed software/hardware maintenance and operations.
- Provided desktop support and troubleshooting assistance.
- Supported main and field office IT operations.
- Optimized IT services for effective employee utilization.

Server & Infrastructure Management:

- Configured Windows Server 2012 R2, Active Directory Users and Computers, DHCP, DNS, and Windows Server Backup.
- Configured shared folders to facilitate file access and collaboration across the organization.
- Oversaw installation, configuration, and troubleshooting of systems.
- Supported IT department in maintaining computing facilities and services.

Sophos Firewall Management:

- Implemented and managed Sophos Firewall for network protection.
- Configured web filtering to control and monitor internet usage.
- Established and maintained VPN connections for secure remote access.
- Deployed Intrusion Detection System (IDS) to identify and respond to network threats.

MikroTik Router Configuration:

- Configured MikroTik routers at branch locations.
- Implemented web filtering to regulate internet access and enhance security.
- Managed bandwidth control to optimize network performance and ensure fair distribution of resources.

Collaboration & Reporting:

- Reported to CEO and Head of Admins; collaborated with ICT staff.
- Coordinated with departments, vendors, ISPs, and IT Solution Center.
- Prepared IT reports and communicated with management

Security & Compliance:

- Ensured security software updates and compliance.
- Supported computer hardware and software troubleshooting.

MIS Development & Management:

- Collaborated with a development company to create a Management Information System (MIS) for the Institute.
- Arranged User Acceptance Testing (UAT) sessions for managers to validate system functionality.
- Purchased equipment and licenses necessary for the MIS.
- Managed the migration of the MIS from the testing environment to the production environment.

DAWIOIL

ICT & ERP Manager

June 2012 – April 2016

Job Purpose: Provide strategic technical leadership and manage all aspects of IT operations, projects, infrastructure and user support. Ensure smooth delivery of reliable IT services through effective management of resources, projects and systems.

Project Management:

- Managed various project phases, including requirements analysis and system testing.
- Coordinated with departments and users to analyze and gather business requirements.
- Monitored complex projects and prepared cost-effective business cases.
- Developed project plans, evaluated meeting agendas, and provided strategic consultation.
- Established and set up the User Acceptance Testing (UAT) environment for testing purposes.
- Migrated the testing environment to the production environment following successful UAT completion.

Documentation & Training:

- Prepared detailed business process execution documents.
- Designed training materials and technical documents for system users.
- Trained staff on processes, systems, and new functionalities.

Maintained and updated system and process documentation:

- Technical Support & System Management:
- Installed and configured hardware, operating systems, and applications.
- Monitored and maintained computer systems and networks, ensuring system availability.
- Provided technical support for system setup, troubleshooting, and issue resolution.
- Resolved system and network problems and replaced hardware components as required.
- Managed user accounts and addressed password-related issues.

Consultation & Process Improvement:

- Offered consultation on functional requirements and process analysis.
- Analyzed and recommended improvements to processes and systems.
- Tested new system functionalities and created test scripts.
- Performed system tests, tracked defects, and maintained defect logs.

Resource Management & Support:

- Managed resource requirements and provided technical support to teams.
- Coordinated with the IT team to ensure project schedules were met.
- Evaluated and tested new technologies for potential implementation.

Client & Stakeholder Relations:

- Established and maintained strong relationships with customers and IT professionals.
- Resolved customer inquiries and addressed developer issues.

ETISALAT TELECOM COMPANY Project: Ubuntu Server Installation & Firewall Configuration:

Job Purpose: Manage technical projects from planning to implementation and work with stakeholders to deliver IT solutions on time and within budget. Ensure projects meet quality standards and organizational objectives.

Ubuntu Server Installation & Virtualization:

Installed and configured Ubuntu server for Sandvine Company's firewall usage.

- Virtualized the server using KVM (Kernel-based Virtual Machine) to optimize hardware utilization and ensure flexibility for future system changes.
- Mounted server into rack and ensured proper installation.
- Customized Ubuntu server to meet Sandvine's requirements.

Firewall Configuration & Security:

- Implemented firewall to block illegal traffic and enhance security.
- Conducted thorough testing to ensure the firewall functioned effectively and met security standards.
- Applied the latest security patches and updated software versions to ensure the system was secure and up-to-date.

Collaboration & Project Delivery:

- Collaborated closely with Sandvine to meet their specific technical and security requirements
- Ensured the successful delivery of the project, enhancing network security and maintaining system integrity.

Technologies Used: Ubuntu Server, Firewall Configuration, Network Security, System Customization, and System Testing.

AWN Projects: ICT & Network Administration

Job Purpose: Manage organization's network infrastructure, systems, and security and user support functions. Optimize network performance and ensure reliable delivery of IT services through proactive monitoring and administration.

- Setup and configured Windows Server with AD, DHCP, DNS, share folders, and user management.
- Configured Mikrotik router for NAT, ad blocking, streaming restrictions, and QOS implementation.
- Established secure VPN connections for remote access.
- Managed firewall, intrusion detection, and antivirus systems for network security.
- Implemented backup and restore procedures for disaster recovery.
- Monitored and optimized network performance through audits and improvements.
- Provided end-user support, resolved network issues, and managed updates.
- Assessed network security risks and recommended mitigation strategies.
- Integrated new technologies and collaborated with IT teams for system integration.
- Conducted user training on network security and performance optimization.

Technologies Used: Windows Server, Active Directory, DHCP, DNS, Mikrotik Router, VPN, Firewall Management, Intrusion Detection, Antivirus Systems, Backup and Restore Procedures.

MELI MIS Project: Muslim English Language Institute

Job Purpose: Manage technical projects from initiation to completion. Work collaboratively with stakeholders to implement customized IT solutions within budget and deliver business value.

- Developed a Management Information System (MIS) for MELI, utilizing the Odoo platform.
- Researched and identified a suitable company in India for the MIS development.
- Established a new office named Karimi Infotech in Hyderabad, India, alongside the MIS project.
- Collaborated closely with MELI staff to tailor the MIS to their specific needs.
- Provided comprehensive training to MELI staff for effective MIS utilization.
- Streamlined operations, enhanced data management, and facilitated informed decision-making through the MIS.
- Gained expertise in project management, software development, and intercultural communication.

Technologies Used: Odoo Platform, MIS Development, Project Management, Intercultural

Communication.

NIDO NGO Project: Windows Infrastructure Implementation

Job Purpose: Implement and manage critical Windows infrastructure to enable seamless communication and secure access to resources across the network. Optimize systems performance and ensure compliance through policy enforcement and access control.

- **Windows Infrastructure Implementation:** Successfully installed, configured, and implemented critical Windows Infrastructure components including WDS, WSUS, NLB, DNS, DHCP, SQL Server, Print Server, and File Server. This encompassed ensuring seamless operation and communication among these systems.
- **DNS, DHCP, and File Server Management:** Managed DNS and DHCP services to ensure efficient IP address allocation and name resolution. Additionally, configured and maintained the File Server, enabling secure data storage and sharing.
- **Policy Application with Group Policy Management:** Utilized Group Policy Management to apply and enforce policies across the network, contributing to enhanced security, standardization, and control over network resources.
- **Internet Connectivity Setup:** Established and configured reliable Internet connectivity, facilitating seamless communication and access to online resources for the organization.
- **User and Group Configuration:** Configured and managed user accounts, groups, and permissions to control access to network resources, fostering secure data management and collaboration.

Technologies Used: Windows Infrastructure Components, DNS, DHCP, Group Policy Management.

Firewalls (Cisco Switches, Mikrotik Router, Cyberoam, Sophos and Pfsense)

Cisco Switches:

- **Configuration and Management:** Extensive hands-on experience with Cisco switches, including configuration of VLANs, trunking, and spanning tree protocol (STP) for efficient network segmentation and loop prevention.
- **Link Aggregation:** Proficient in setting up Link Aggregation Control Protocol (LACP) to optimize bandwidth and provide redundancy.
- **Network Security:** Implemented security measures such as port security and access control lists (ACLs) to safeguard network infrastructure.
- **Troubleshooting and monitoring:** utilized tools and techniques for diagnosing and resolving network issues, including monitoring network performance and optimizing switch configurations.
- **Configuration and Management:** Extensive hands-on experience with Cisco switches, including configuration of VLANs, trunking, and spanning tree protocol (STP) for efficient network segmentation and loop prevention.
- **Link Aggregation:** Proficient in setting up Link Aggregation Control Protocol (LACP) to optimize bandwidth and provide redundancy.
 - **Network Security:** Implemented security measures such as **port security, access control lists (ACLs)**, and advanced features like:
 - **MAC Flooding control** to prevent MAC address table exhaustion.
 - **DHCP Snooping** to prevent **DHCP Spoofing** attacks.
 - **Dynamic ARP Inspection (DAI)** for **ARP Spoofing** mitigation.
 - Configured to prevent **VLAN Hopping** attacks by securing VLAN boundaries.

- **Troubleshooting and Monitoring:** Utilized tools and techniques for diagnosing and resolving network issues, including monitoring network performance and optimizing switch configurations to ensure security and operational efficiency.

Mikrotik Router:

- **RouterOS Configuration:** Skilled in configuring and managing MikroTik RouterOS for optimal network performance.
 - **Firewall Management:** Proficient in creating and managing firewall rules to enhance network security.
 - **VPN Implementation:** Experienced in setting up and maintaining secure VPN connections, including PPTP, L2TP, and IPSec.
 - **Bandwidth Management:** Expertise in configuring queue trees and simple queues for effective bandwidth allocation and optimization.
 - **Routing Protocols:** Knowledgeable in implementing dynamic routing protocols like OSPF, BGP, and RIP.
 - **Network Address Translation (NAT):** Skilled in configuring NAT for secure and efficient IP address management
 - **Wireless Configuration:** Proficient in setting up wireless networks, including access point mode and client mode configurations.
 - **Monitoring and Troubleshooting:** Experienced in using MikroTik tools like Torch, Ping, and Log Viewer for diagnosing and resolving network issues.
 - **Hotspot Setup:** Expertise in deploying and managing MikroTik Hotspot systems for user authentication and internet access control.
 - **Scripting:** Knowledgeable in scripting for task automation, including backup scheduling and configuration updates.
-
- **Recursive Routing & Failover:** Skilled in configuring Recursive Routing and Failover mechanisms using MikroTik RouterOS v7 for enhanced network reliability and redundancy.
 - **Policy-Based Routing (PBR):** Skilled in implementing Policy-Based Routing to route traffic based on specific criteria such as source/destination IP, port, or application. This enhances control over traffic flow and ensures that specific types of traffic follow optimal paths.
 - **Failover:** Expertise in setting up failover mechanisms to ensure high availability and network reliability. This includes configuring automatic switching between primary and backup links in case of failure, minimizing downtime and maintaining consistent network performance.

Cyberoam Firewall:

- Firewall policies and rules
- Intrusion Detection and Prevention (IDP)
- Web filtering
- VPN protocols (e.g., IPsec, SSL)

Sophos Firewall:

- Firewall configurations
- Intrusion Prevention System (IPS)
- Web Application Firewall (WAF)
- VPN protocols (e.g., SSL VPN, IPsec)

Fortinet Firewall:

- Firewall policies and rules
- Intrusion Detection and Prevention (IDP)
- Web filtering

ASAR KHAN

[Email: asar23@gmail.com](mailto:asar23@gmail.com); asarkhan447@gmail.com

Phone Number: 0091 8509169630

- VPN protocols (e.g., IPsec, SSL)

pfSense Firewall:

- Firewall setups and configurations
- Virtual Private Network (VPN) configurations
- Stateful packet inspection (SPI)
- NAT (Network Address Translation)
- Setting up a captive portal on pfSense
- IPS and IDS
- Crowdsec
- Pfblockerng
- Ntopng

Server Management:

- Windows Servers (2003, 2008, 2008r2, 2012, 2012r2, 2016, and 2019)
 - **Windows Server 2003 to 2019:** Proficient in configuring and managing Windows Server versions spanning from 2003 to 2019.
 - **Protocols:** Extensive knowledge of essential networking protocols, including TCP/IP, SMB, HTTP, FTP, DNS, and DHCP, ensuring reliable data communication.
 - **Configurations:** Expertise in a wide range of configurations, such as Active Directory setup, DNS server configuration, DHCP server setup, file and print services, web services, security policies, Group Policy Objects (GPOs), Terminal Services, Hyper-V virtualization, and network services like IIS and NPS.
 - **Primary and Additional Domain Controllers:** Skilled in configuring and managing Primary Domain Controllers (PDC) and Additional Domain Controllers (ADC) to ensure efficient Active Directory replication, redundancy, and authentication services across the network. Experienced in

- maintaining synchronization and failover mechanisms between PDC and ADC for enhanced reliability.
- **Specializations:** Significant experience in advanced Windows Server features, including Hyper-V virtualization, PowerShell automation, Direct Access for remote access, and security enhancements like Shielded VMs and Windows Defender ATP.
- **File Server Management:** Extensive experience in managing file servers, including setting up and maintaining shared folders, configuring NTFS permissions, and managing access control lists (ACLs). Skilled in implementing disk quotas to manage storage usage, configuring file screens to enforce file storage policies, and setting up DFS (Distributed File System) for file replication and redundancy.
- **Print Server Management:** Experienced in installing and configuring print servers on Windows Server environments to manage network printers efficiently. Skilled in deploying Group Policy to automatically connect users to shared printers, setting printer permissions, monitoring print queues, and troubleshooting driver compatibility issues.
- **Windows Server Failover Clustering:** Proficient in configuring and managing Windows Server Failover Clustering to ensure high availability and redundancy for critical applications and services. Experienced in setting up clusters for file servers, Hyper-V, and other services to minimize downtime and maintain service continuity.
- **FSMO Role Configuration & Management:** Extensive experience in managing FSMO roles (Schema Master, Domain Naming Master, RID Master, PDC Emulator, and Infrastructure Master) within Active Directory environments. Proficient in configuring and transferring FSMO roles across domain controllers to ensure smooth Active Directory operations.
- **Remote Desktop Services (RDS):** Experienced in configuring and managing Remote Desktop Services (RDS) to provide secure, remote access to applications and desktops. Skilled in setting up RDS licensing, RemoteApp programs, RD Gateway, RD Web Access, and deploying RDS in both small and large-scale environments to enhance workforce productivity.
- **RADIUS Server Installation and Configuration with NPS (Network Policy Server):** Proficient in installing and configuring a RADIUS Server using Microsoft's Network Policy Server (NPS). Skilled in setting up RADIUS to enforce authentication and authorization policies for network access, VPNs, and wireless networks. Experienced in configuring NPS policies, RADIUS clients, and certificates for secure user authentication across the network.
- **Common Tasks:** Proficient in user and group management, security and firewall setup, remote access solutions (VPN, RDS, Direct Access), file and print sharing, backup and recovery, DNS and DHCP management, Active Directory administration, Group Policy Object (GPO) configuration, and file server management tasks including quota management, file screening, and data replication.

cPanel Installation and Configuration:

- Installed and configured cPanel/WHM for hosting management.
- Managed domain names, DNS records, email accounts, and web hosting for multiple websites.
- Configured FTP, SSL certificates, and backup solutions for hosted websites.
- Implemented security measures such as firewalls, malware scanning, and DDoS protection using cPanel tools.
- Optimized server performance and ensured smooth operation by configuring resource limits.
- Automated routine tasks using cron jobs within cPanel for efficient system management.

Linux Servers (Ubuntu, Red Hat, Debian)

- **Operating Systems:** Highly skilled in managing Linux servers, with expertise in Ubuntu, Red Hat, and Debian distributions.
- **Server Deployment:** Proficient in deploying and configuring Linux servers to meet various organizational needs.
- **Administration:** Experienced in system administration tasks, including user management,

permissions, and file system management.

- **Security:** Knowledgeable in implementing security measures and access controls to safeguard Linux servers from threats and vulnerabilities.
- **Package Management:** Skilled in package management using package managers such as APT (Advanced Package Tool), YUM (Yellowdog Updater, Modified), and DPKG (Debian Package).
- **Scripting:** Capable of writing and executing scripts (Bash, Python, etc.) to automate routine tasks and streamline server management.
- **Server Hardening:** Proficient in server hardening practices, ensuring Linux servers are protected against unauthorized access and cyber threats.
- **Troubleshooting:** Experienced in diagnosing and resolving issues related to Linux server performance, networking, and services.
- **Updates and Maintenance:** Skilled in applying updates, patches, and security fixes to maintain server stability and security.
- **Open Source Tools:** Familiar with a wide range of open-source tools and utilities commonly used in Linux server environments.

Virtualization:

Windows Hyper-Visor

- **Virtual Machine Deployment:** Skilled in creating and managing virtual machines (VMs) using Microsoft Hyper-V Manager and PowerShell.
- **Hyper-V Networking:** Proficient in configuring virtual switches (external, internal, and private) for VM connectivity.
- **Storage Integration:** Experienced in integrating and managing storage solutions, including SMB shares, iSCSI, and VHD/VHDX disk management.
- **High Availability and Clustering:** Skilled in setting up and managing Hyper-V clusters for fault tolerance and high availability.
- **Live Migration:** Expertise in performing live migrations of virtual machines without downtime.
- **Resource Management:** Knowledgeable in configuring dynamic memory, processor settings, and resource metering for optimal VM performance.
- **Backup and Disaster Recovery:** Experienced in setting up Hyper-V Replica and using tools like Windows Server Backup and Veeam for data protection and recovery.
- **Nested Virtualization:** Skilled in enabling and managing nested virtualization environments for testing and development purposes.
- **Performance Monitoring:** Proficient in using tools like Performance Monitor and Resource Monitor to optimize Hyper-V host and VM performance.
- **Security and Compliance:** Expertise in implementing shielded VMs, secure boot, and virtual TPM for enhanced security in virtual environments.

Proxmox

- **Virtual Machine Management:** Proficient in creating, configuring, and managing virtual machines within Proxmox VE.
- **Containerization:** Experienced in deploying and managing LXC containers for lightweight virtualization.
- **Cluster Management:** Skilled in setting up and managing Proxmox clusters for high availability and load balancing.
- **Backup and Restore:** Expertise in configuring backup schedules and restoring VMs/containers using Proxmox's integrated backup solutions.
- **Storage Integration:** Knowledgeable in integrating various storage backends, including NFS, iSCSI, Ceph, and local storage.
- **Networking Configuration:** Experienced in configuring Proxmox virtual bridges, VLANs, and network interfaces for seamless connectivity.
- **High Availability (HA):** Skilled in configuring and maintaining high-availability clusters to minimize downtime.
- **Proxmox Firewall Management:** Proficient in configuring and managing Proxmox

ASAR KHAN

Email: asar23@gmail.com; asarkhan447@gmail.com

Phone Number: 0091 8509169630

- **Monitoring and Resource Optimization:** Experienced in monitoring resource usage and optimizing performance using Proxmox tools like QEMU Guest Agent and metrics.
- **Proxmox VE Upgrades and Maintenance:** Knowledgeable in upgrading Proxmox VE versions, applying patches, and maintaining system stability.

VPN Technologies:

- IPsec
- Zerotier
- Tailscale
- OpenVPN
- Wireguard

Wazhu

- Open-source Cybersecurity tool

Zabbix Monitoring Tool

- Open-Source Monitoring Tool
- LibreNMS
- Mesh Central

Backup Solution

- Veeam Backup Solution
- Proxmox Backup Server

Software Proficiency:

- MS Office Package (Documentation and Presentations)
- Office 365 (Proficient in managing and utilizing cloud-based collaboration tools, including SharePoint, OneDrive, Teams, and Exchange Online)
- Web Automation (Selenium and Python)
- Network Automation (Python)

Continuous Learning, Adaptability, and Professional Growth

- Continuously enhancing skills and knowledge through practical experience and self-study.
- Successfully completed various IT projects, demonstrating expertise in networking, server management, and security.
- Actively engaged in online communities and forums to stay updated with the latest industry trends and best practices.
- Committed to pursuing future certifications and training to further advance skills and knowledge in the IT field.
- Dedicated to ongoing professional growth and development to remain at the forefront of the IT industry.
